THURSDAY, AUGUST 23, 2001

AVERAGE ANNUAL PAY IN THE DISTRICT OF COLUMBIA, 1999

Annual pay in the District of Columbia averaged \$50,885 in 1999, increasing 5.0 percent over the year, according to the U.S. Department of Labor's Bureau of Labor Statistics. Sheila Watkins, regional commissioner of the Bureau in Philadelphia, noted that the District's pay level surpassed that for each of the 50 States, and has done so every year since 1987. Average annual pay in the District in 1999 was \$17,545 higher than the national average.

Average pay in the South Atlantic division¹ grew at a 4.1 percent pace in 1999 compared to 4.4 percent nationally. Within the division, pay levels exceeded the nationwide average of \$33,340 in Delaware (\$35,157) and Maryland (\$34,489), as well as in the District of Columbia. In the remaining six states, annual pay ranged from a low of \$26,018 in West Virginia to \$33,025 in Virginia. Growth in average annual pay ranged from 2.7 percent in Florida to 5.3 percent in Virginia. Virginia's pay increase was the fifth fastest in the nation and the District's was sixth.

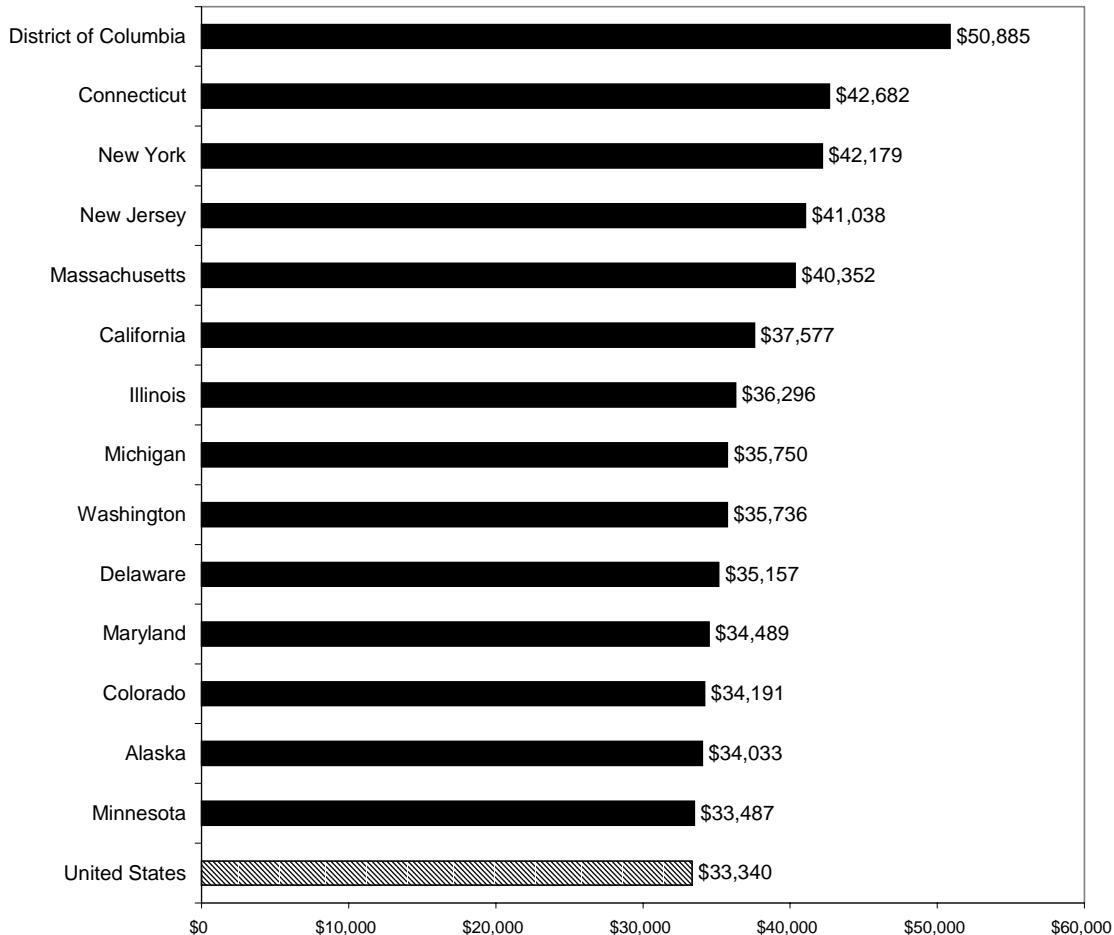

Half of the 14 areas in the U.S. where the average pay level surpassed the national average fell in a contiguous band along the east coast stretching from Massachusetts to the District of Columbia. The five highest pay levels nationwide were in the District of Columbia (\$50,885), Connecticut (\$42,682), New York (\$42,179), New Jersey (\$41,038), and Massachusetts (\$40,352). (See chart A.) The five states with the lowest annual pay in 1999 – Montana, North Dakota, South Dakota, Mississippi, and Arkansas – have posted the five lowest annual pay figures every year since 1988. Pay in those states ranged from \$23,260 to \$25,371. (See table 1.)

Less than one-quarter of the states had percentage increases in annual pay that exceeded the 4.4 percent growth rate in the United States. The fastest rate of pay growth in the nation -- 8.0 percent – was in Washington. Massachusetts (6.8 percent), California (6.3 percent), and Colorado (6.0 percent) were the only other states that had percentage increases of 6 percent or more. At 0.5 percent, Alaska registered the smallest increase in pay as it has every year since 1995. Other states with low rates of pay growth were Louisiana (1.1 percent), New Mexico (2.2 percent), Mississippi (2.4 percent), and Hawaii (2.6 percent). Except for Hawaii, the 1999 growth rate for each of these states was lower than in 1998. No state reported a decline in pay in 1999.

¹ The South Atlantic division referenced in this release corresponds to the Census definition and is comprised of 8 states (Delaware, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia) and the District of Columbia.

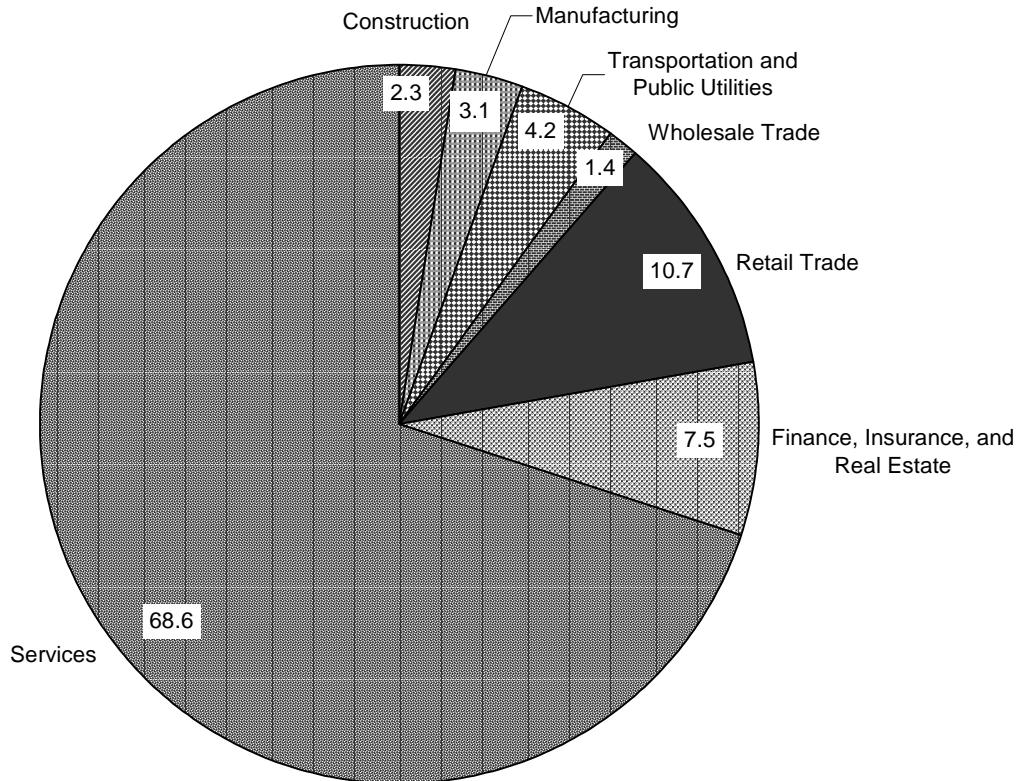

Annual pay data are compiled from reports submitted by employers subject to State and federal Unemployment Insurance (UI) laws which cover 122 million full- and part-time workers nationwide. Average annual pay is computed by dividing total annual payrolls of employees covered by UI programs by the average monthly number of these employees. (See Technical Note.) Pay differences among states reflect the varying composition of employment by occupation, industry, and hours of work, as well as other factors. Similarly, over-the-year pay changes may reflect shifts in these characteristics, as well as changes in the level of average pay.

Chart A. Average annual pay for the District of Columbia and states exceeding U.S. level in 1999

Annual pay in the District of Columbia's private sector industries, which comprised 64 percent of the work force, averaged \$47,945 in 1999, increasing 6.0 percent over the year. Average annual pay decreased 1.1 percent for construction workers in the District, while the remaining industries had percentage gains in all publishable industry divisions, ranging from a low of 1.5 percent in finance, insurance, and real estate to 12.5 percent in wholesale trade. (See table 2.) Finance, insurance, and real estate continued to be the highest paid industry averaging \$71,014. Retail trade, with a large percentage of part-time workers, remained the lowest paid at \$18,733. Services was the District's largest industry division accounting for 69 percent of all private sector employment, followed by retail trade with 11 percent. (See chart B.) All published industry divisions in the District of Columbia had higher pay levels than their United States counterparts. Overall, private sector pay (which excludes government) in the District, was almost \$15,000 higher than the national level of \$33,244.

Chart B. Percent of 1999 private sector employment in District of Columbia by industry

The District of Columbia is part of the Washington, D.C.-Md.-Va.-W.Va., Metropolitan Statistical Area², (MSA). The average annual pay for the MSA was \$42,653 (up 5.0 percent from 1998), the ninth highest level among the 316 metropolitan areas in the nation.

Nationwide, San Jose, Calif., the hub of Silicon Valley, led the nation with an average annual pay level of \$61,117 in 1999. New York, N.Y., had the second highest pay level (\$52,444), followed by San Francisco, Calif. (\$50,119); New Haven-Bridgeport-Stamford-Waterbury-Danbury, Conn. (\$47,133); and Middlesex-Somerset-Hunterdon, N.J. (\$46,193). For the tenth straight year, Jacksonville, N.C., had the lowest average annual pay among metropolitan areas (\$20,278). The second lowest pay occurred in Yuma, Ariz. (\$20,362), followed by Brownsville-Harlingen-San Benito, Tex. (\$20,998), McAllen-Edinburg-Mission, Tex. (\$21,111), and Myrtle Beach, S.C. (\$21,701). These five MSAs had the lowest average annual pay in 1998 as well. From 1998 to 1999, 245 metropolitan areas experienced less than average pay growth (4.4 percent). Of these, four had growth of 1 percent; 16 grew less than 1 percent; and six reported a decline in average annual pay. The majority of these low growth/no growth metro areas were located in the South or Midwest, in particular, the states of Texas, Louisiana, Florida, and Iowa.

² Nationwide there are 316 metropolitan areas. The general concept of a metropolitan area is that of a core area containing a large population nucleus, together with adjacent communities that have a high degree of economic and social integration within that core. See Technical Note for criteria used in determining a metropolitan area.

Data are also available for all of the nation's 305 largest counties³ (those with employment of 75,000 or more). Nationally, New York County, N.Y., comprised entirely of the borough of Manhattan, continued to have the highest level of average annual pay at \$65,794, followed by the counties of Santa Clara, Calif. (\$61,117); Fairfield, Conn. (\$56,358); Loudoun, Va. (\$52,283); and Somerset, N.J. (\$52,105). The District of Columbia ranked eighth among these counties in pay level and 50th in rate of pay increase. The lowest average annual pay in the United States was reported in Cameron County, Tex. (\$20,998), followed by the counties of Hidalgo, Tex. (\$21,111); Horry, S.C. (\$21,701); Yakima, Wash. (\$22,402); and Tulare, Calif. (\$22,701). From 1998 to 1999, 224 of the largest counties in the U.S. experienced less than a 4.5 percent average growth in annual pay. Of these slower growing counties, three had growth of 1 percent, 14 experienced growth of less than 1 percent, and three reported a decline in average annual pay.

NOTE

Data presented in this release will differ from that previously published in the three Average Annual Pay releases issued in November and December 2000. Pay data in this release is no longer preliminary. In addition, data for New Jersey, which was unavailable at the time the national releases were issued, is now included in all series.

TECHNICAL NOTE

Background

These data are the product of a federal-state cooperative program in which State Employment Security Agencies (SEAs) prepare summaries of employment and total pay of workers covered by Unemployment Insurance legislation. The summaries are a by-product of the administration of state unemployment insurance (UI) programs that require most employers to pay quarterly taxes based on the employment and wages of workers covered by UI. Data for 1999 are preliminary and subject to revision.

Coverage

Employment and wage data for workers covered by state UI laws and for federal civilian workers covered by the Unemployment Compensation for Federal Employees (UCFE) program are compiled from quarterly contribution reports submitted to the SEAs by employers. In addition to the quarterly contribution reports, employers who operate multiple establishments within a state complete a questionnaire, called the "Multiple Worksite Report," which provides detailed information on the location and industry of each of their establishments. Average annual pay data are derived from summaries of employment and wages submitted by states to the Bureau of Labor Statistics. These reports are based on place of employment rather than place of residence.

UI and UCFE coverage is broad and basically comparable from state to state. In 1999, UI and UCFE programs covered workers in 127.0 million jobs. The estimated 122 million workers in these jobs (after adjustment for multiple jobholders) represent 99 percent of wage and salary civilian employment. Covered workers received \$4.232 trillion in pay, representing 94.7 percent of the wage and salary component of personal income and 45.5 percent of the gross domestic product.

³ A large county is defined as having an employment level of 75,000 or more; in some jurisdictions, independent cities are also included in the count. Altogether, there are 305 counties in the United States which meet this criteria.

Major exclusions from UI coverage during 1999 included most agricultural workers on small farms, all members of the Armed Forces, elected officials in most states, most employees of railroads, some domestic workers, most student workers at schools, and employees of certain small nonprofit organizations.

Concepts and methodology

Average annual pay is computed by dividing total annual pay of employees covered by UI programs by the average monthly number of these employees. Included in the annual payroll data are bonuses, the cash value of meals and lodging when supplied, tips and other gratuities, and, in some states, employer contributions to certain deferred compensation plans such as 401(k) plans and stock options. Monthly employment is based on the number of workers who worked during or received pay for the pay period including the 12th of the month. With few exceptions, all employees of covered firms are reported, including production and sales workers, corporation officials, executives, supervisory personnel, and clerical workers. Workers on paid vacations and part-time workers also are included. Percentage changes in average annual pay for 1999 were computed using final 1998 data as a base.

The ratio of full-time to part-time workers as well as the number of individuals in high-paying and low-paying occupations affects average annual pay. When comparing average annual pay levels between industries and/or states, these factors should be taken into consideration. Annual pay data only approximate annual earnings, because an individual may not be employed by the same employer all year or may work for more than one employer. Year-to-year changes in average annual pay can result from a change in the proportion of employment in high- and low-wage jobs, as well as from changes in the level of average annual pay.

Industry data in table 2 are for the private sector only. Average annual pay for employment in the private sector is presented by industry division as defined in the 1987 Standard Industrial Classification Manual. Government data for federal, state, and local establishments is also available but has not been included in this release.

A few covered employers provided insufficient information on the nature of their businesses to assign a specific SIC classification and therefore could not be classified by industry division. The wages for these nonclassifiable establishments, along with data for the agricultural division, are not shown separately, but are included in the averages for state and national totals.

The Office of Management and Budget (OMB) defines metropolitan areas for use in federal statistical activities and updates these definitions as needed each summer—data in this release use criteria established in definitions issued June 23, 1998 (OMB Bulletin No. 98-06). The 316 metropolitan areas in the United States, along with 6 in Puerto Rico, are a compilation of a set of areas classified as Metropolitan Statistical Areas (MSAs), Primary Metropolitan Statistical Areas (PMSAs) and Consolidated Metropolitan Statistical Areas (CMSAs). Generally speaking, a MSA consists of one or more counties and meets specified size criteria—either it contains a city of at least 50,000 inhabitants, or it contains an urbanized area of at least 50,000 inhabitants, and has a total population of at least 100,000 (75,000 in New England). A CMSA is a metropolitan area that has a population of at least 1 million and has been divided into two or more PMSAs. The CMSA comprises the same geographic area as its constituent PMSAs which are loosely defined as free-standing areas that have a population of at least 100,000.

County definitions are assigned according to Federal Information Processing Standards Publications (FIPS PUBS) as issued by the National Institute of Standards and Technology, after approval by the Secretary of Commerce pursuant to Section 5131 of the Information Technology Management Reform Act of 1996 and the Computer Security Act of 1987, Public Law 104-106. Areas shown as counties include areas designated as independent cities in some jurisdictions, and, in Alaska, those designated as census areas where counties have not been created.

Additional statistics and other information

Additional average annual pay data (or Covered Employment and Wages data) is available on the BLS Internet site at <http://www.bls.gov/cewhome.htm>. Data can be accessed in two ways, through Selective Access, which allows quick access to particular items, or via the special request FTP service, which allows access to extensive collection of flat text files. The Philadelphia Information Office can provide assistance accessing these files by calling (215) 597-3282.

This news release, along with other BLS statistics and information, is available via the Internet at the BLS World Wide Web site <http://www.bls.gov/ro3news.htm>.

BLS issues an annual report that provides data from state UI and UCFE programs. The comprehensive bulletin, Employment and Wages, Annual Averages, 1999, features information by detailed industry on establishments, employment, and wages for the nation and individually for each state. The report will be available for sale early this year from the Bureau of Labor Statistics Publications Sales Center, P.O. Box 2145, Chicago, Illinois 60690. Telephone orders using a credit card (MasterCard, VISA, Discover/NOVUS) or Government Printing Office Deposit Account are accepted at (312)353-1880 from 8 a.m. to 3 p.m. CT.
